

# Testing Specialist - Digital Product

## About Us

PhotoSi offers people the instruments to speak about their lives through images; PhotoSi provides technology and tools to shape photos which become part of an intense and passionate flow of emotions. We're changing our shape by maintaining the identity of our heritage: *We have been printing emotions since 1976 and have been the first app in the AppStore to print photos\**.

## Why we're looking for you

The Company is evolving at a terrific pace. The experience we want to give our customers is core in this growth. Every two weeks new experiences and functionalities are released to our audience. You will be in the team that tests and certifies that this goal is achieved.

## Your Role

With a customer centric mindset, the *Testing Specialist* tests all the functionalities and experiences released in each sprint.

The *Testing Specialist* is part of the roadmap of the releases and of product development overall. No testing, no release, no update, no feature, no evolution ...

The *Testing Specialist* refers to the Testing Lead and will be responsible for the tasks assigned.

## The activities

- You will work with the scrum master and the development team to identify and resolve defects and bugs.
- You will drive functional testing, data validation, regression testing and user acceptance testing.
- You will test native apps built for AppStore, PlayStore and Huawei Store.
- You will test web experiences both for mobile and desktop.

## About you (and somehow about us)

First of all ...

- You love to work and consider it as an expression of your self-realization
- You're generous towards your team and behave with respect and responsibility
- You want to conquer the trust of your lead and the team as a whole in order to grow
- You have a continuous improvement mindset

... then

- You have a Bachelor's degree in Engineering, Computer Science, Statistics, Mathematics or relevant field
- You speak and write in English

## Nice to have

- You have experience in testing and debugging software
- You have some experience with Project Management Software (Trello, Jira, Infinity)
- You know an additional foreign language (Spanish, German French or other).
